

how to embed a widget

Step 1: go to <https://embed.dermalogica.com/>

Select the widget you want to embed using the dropdown menu called “widgets” and edit any of the custom fields, should you want to customize them.

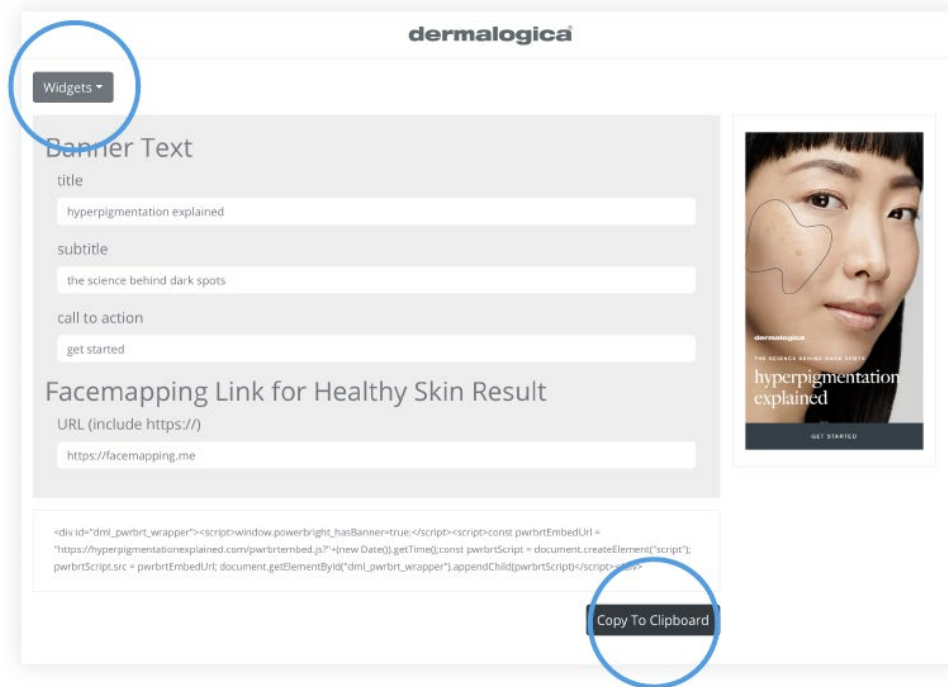

Step 2: generate the embed snippet

Once you have completed the form, a custom embed snippet will be generated. Have your developer paste the snippet in a <div> element that is 100% width. This piece is very important, because padding or margins on either side of the widget will interfere with the display.

Step 3: confirm embed

Email a link to your new embed to stephanie.hawken@dermalogica.com to confirm everything is working properly

Step 4: start driving traffic to your embed!

dermalogica
